

HOW

- Defining Programme Management
- Understanding what Programme Controls does
- Reporting flows

Are you a Project or a Programme?

Or are you something else?

Think aviation...

The Shard

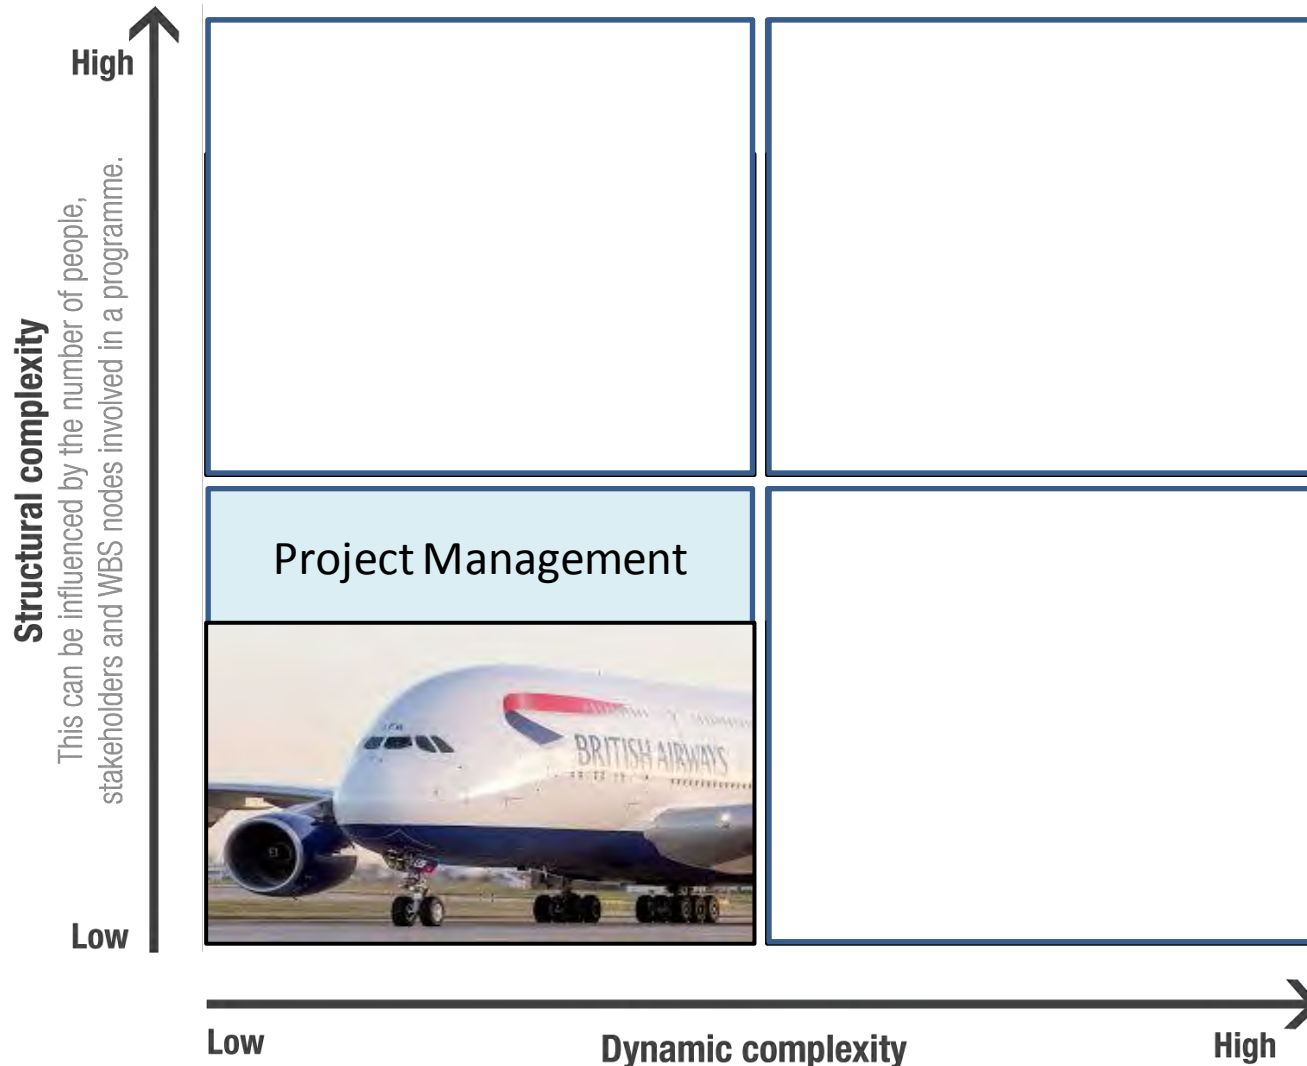

Client: Teighmore Construction Ltd

Value: £400m

Key features:

- Tallest building in Western Europe on completion: 1,016 feet
- 600,000 ft² of offices, 26 floor Shangri-La hotel, upscale residential apartments and three viewing galleries
- Sits above London Bridge mainline and underground stations – extensive liaison with rail operators
- Busy city location

The complexity of a task will vary the more uncertainty there is regarding scope of works, targets and timescales.

2012 Olympic Games

Client: Olympic Delivery Authority

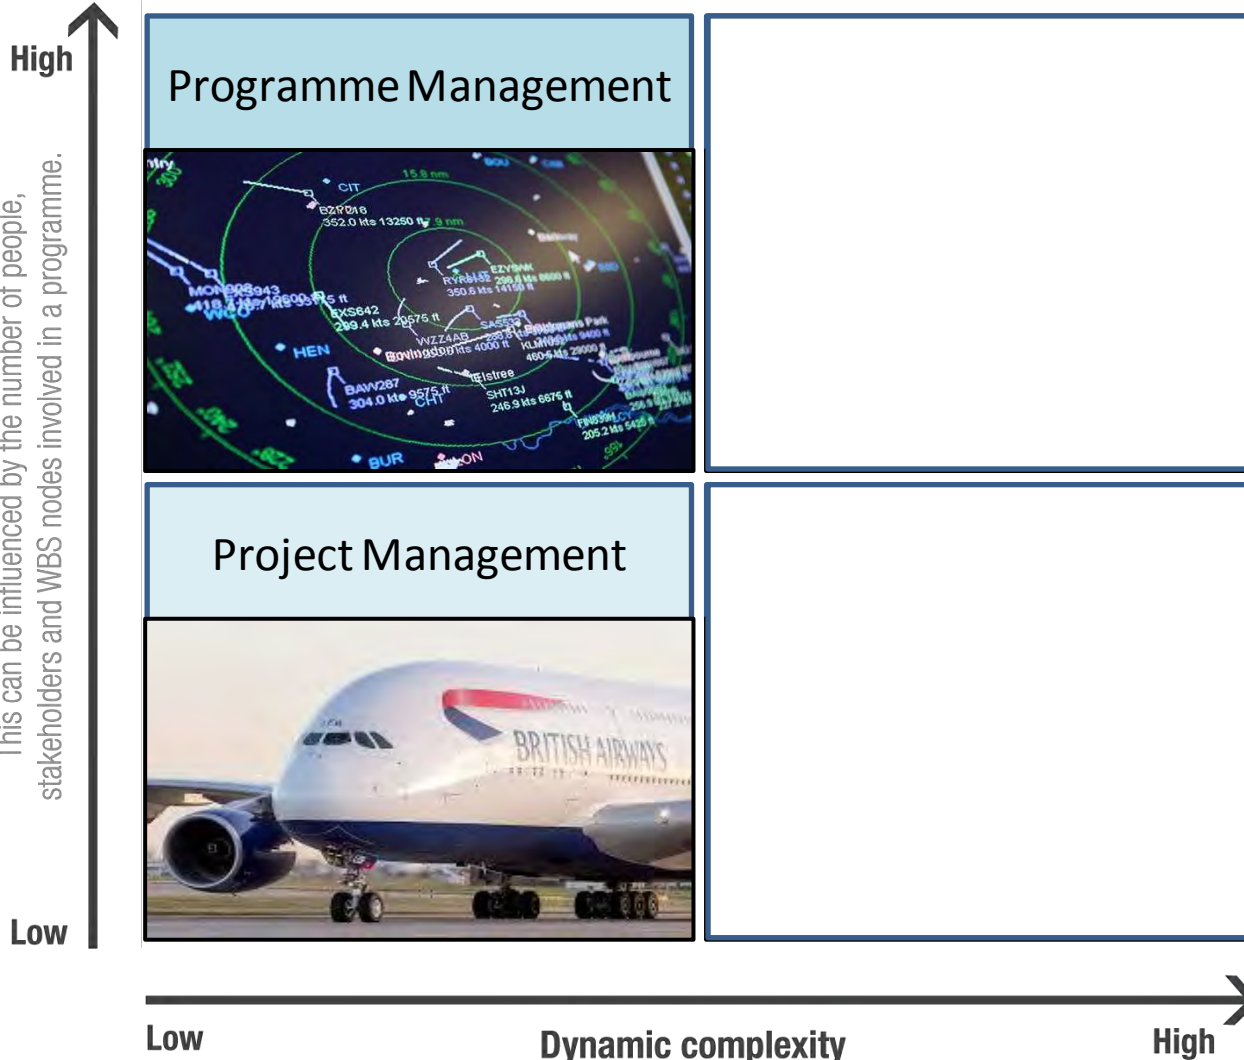

Value: £7Bn

Key features:

- Park includes stadium, velodrome, Aquatics Centre, Basketball facility, press center and athletes village
- 20 bridges created
- Extensive infrastructure requirements
- Sustainable development

Structural complexity

This can be influenced by the number of people, stakeholders and WBS nodes involved in a programme.

Low

Dynamic complexity

High

The complexity of a task will vary the more uncertainty there is regarding scope of works, targets and timescales.

Transport For London

Project duration:
2 Year Framework

Value: Rates Based

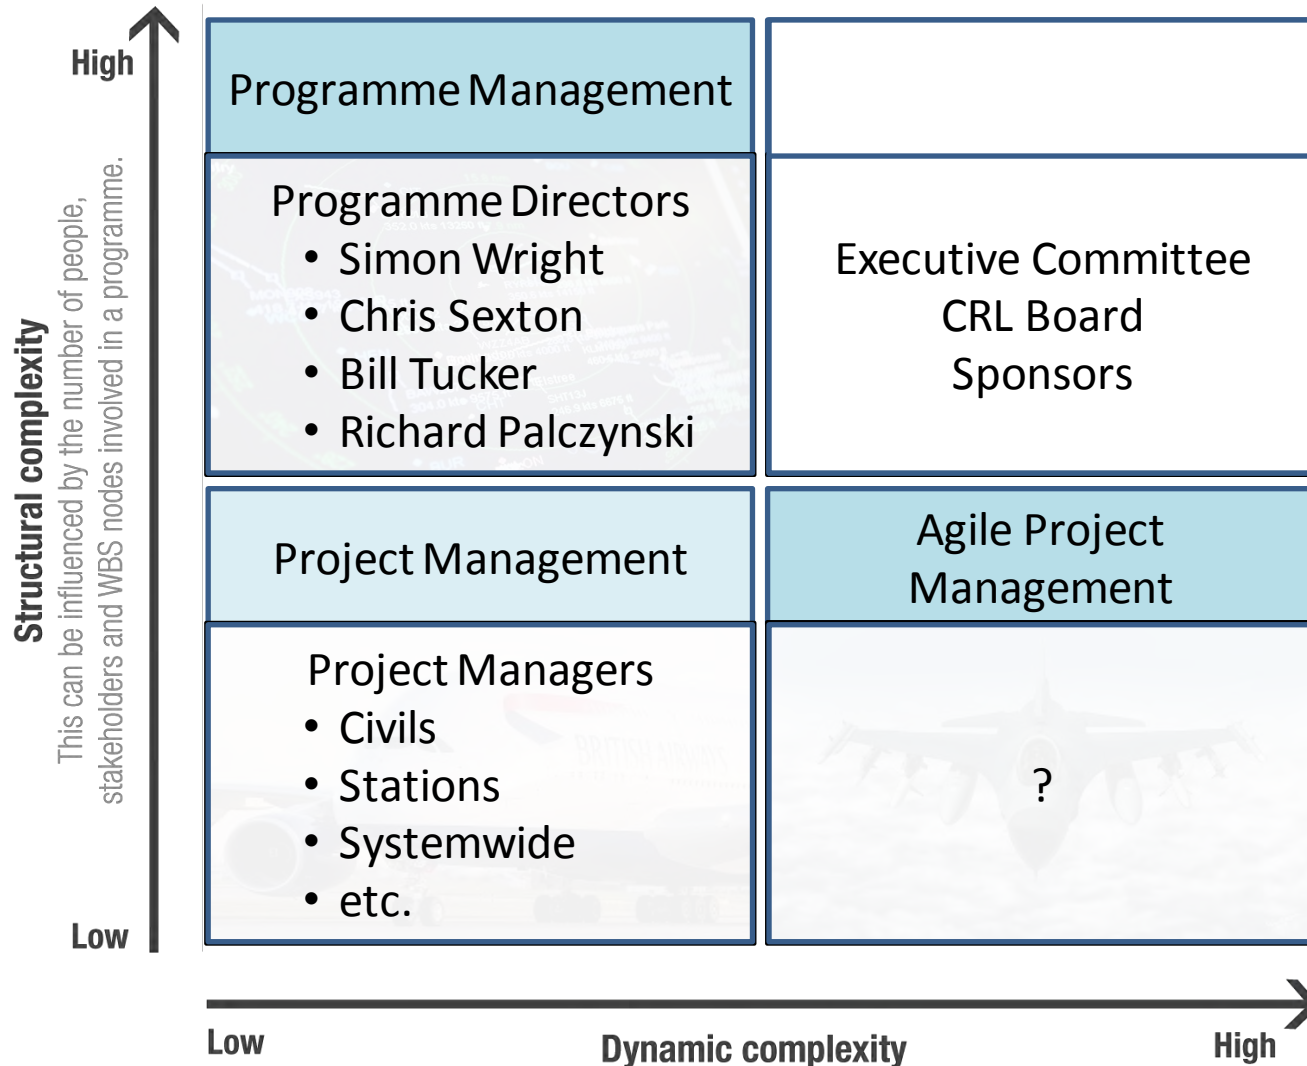

Roles:

Programme and Project management,
Project Controls, Cost consultancy,
Procurement, Logistics, Supply Chain
Management, Risk Management,
Benefits Management

Key features:

- Agile approach
- Rapid deployment

The complexity of a task will vary the more uncertainty there is regarding scope of works, targets and timescales.

If we've established the different roles, the next question is what do these people need in order to be able to do their jobs?
